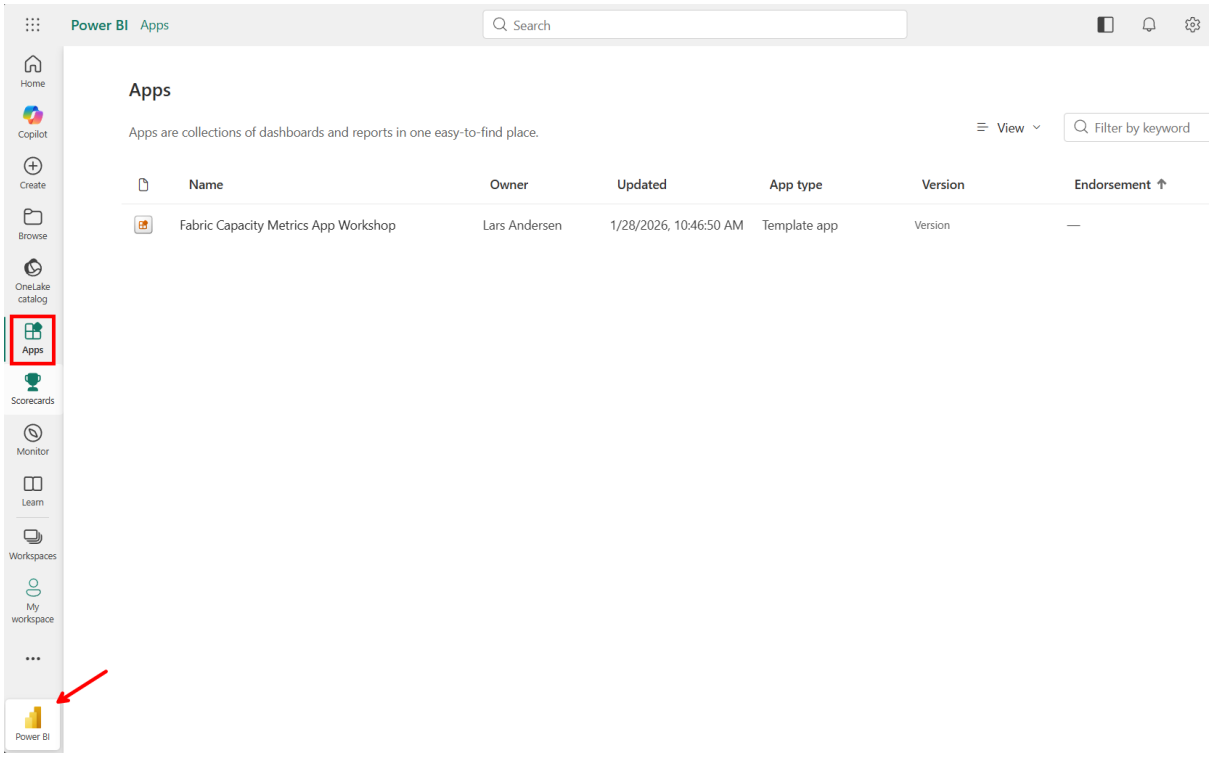
Lab 3 – Capacity Administration

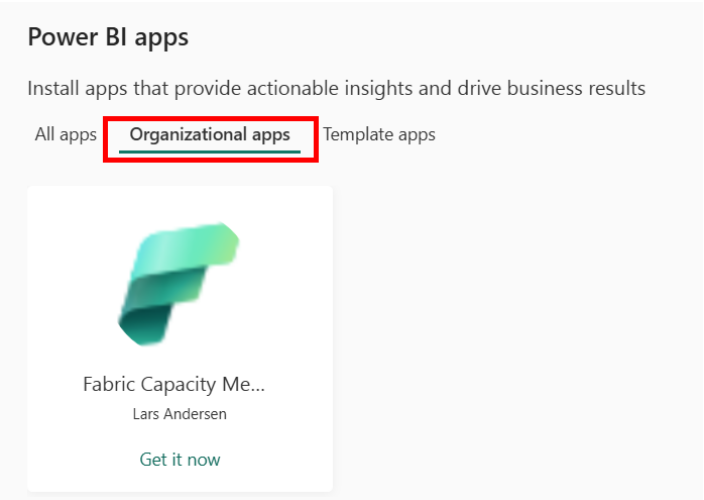
Lab 3.1 Explore Capacity Metrics app report

Go to Capacity Metrics app.

App -> Fabric Capacity Metrics (remember to first switch to the Power BI view in lower left-hand corner)

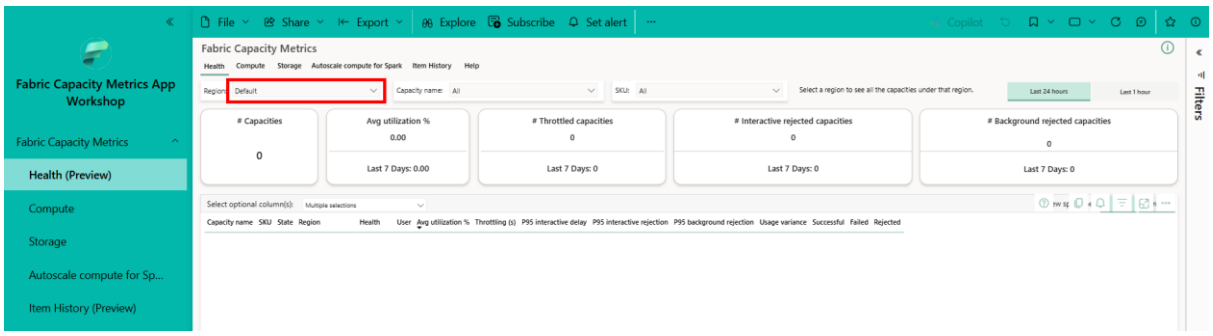


If you don't see the app, select "Get apps", navigate to "Organizational apps" and install the app "Fabric Capacity Me...":



For the questions below, you should use **FabConEU4-P1**, but you are welcome to look at the other capacities as well.

The landing page is Health (Preview) where you will see a list of all capacities in selected region for the tenant. Initially, you need to select a region you want to look at, because this tenant doesn't have any capacities in the home region:



Browse around in the report. You can select individual pages in the left navigation/top of report or utilize drill through on the Health page to go to specific capacity.

Try and find the answer to these questions for capacity **FabConEU4-P1**, this capacity is in region North Central US:

1. Which item has consumed most CUs the past 14 days?
   What about on **19 February 2026**?
2. How much "% of Base Capacity" background usage did item **LoadData** in workspace **Mastering Fabric Administration** use on **18 February 2026 around 8:45 (8:45am)**?
   Hint, use zoom-slicer on "CU % over time" visual to select relevant TimePoint Detail time interval.
3. There has been Copilot usage in workspace **Mastering Fabric Administration** on **23 February 2026 in the morning (look at timepoint detail around 10:20 and 10:50)**. Is that interactive or background usage?
   Hint, operation type is called "Copilot in Fabric", or look in Fabric Operations documentation
4. Have any operations been throttled on the capacity?
   If yes, when?
   If not, has the capacity been close to throttling limits?
